REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: Claims 1-15,19-21 are considered allowable since when reading the claims in light of the specification none of the references of record alone or in combination disclose or suggest the combinations of limitations specified in the independent claims. As to claims 1-9,14, the prior art of record does not teach advertising by the requesting router having received the reply, a router advertisement message containing the address of the domain name service server to a subnet to which the requesting router having received the reply belongs, thereby searching a location of the domain name service server on the network using the predetermined dynamic routing protocol. As to claims 10-11, the prior art of record does not teach, wherein all of the routers within the autonomous system transmit router advertisement (RA) messages including the link state information of the DNS server to predetermined hosts which ask for a location of the DNS server, thereby automatically setting an address of the DNS server on the predetermined hosts.

As to claims 12, the prior art of record does not teach advertising by the requesting router having received the reply, a router advertisement message containing the address of the domain name service server to a subnet to which the requesting router having received the reply belongs, thereby searching a location of the domain

Art Unit: 2616

name service server on the network using the predetermined dynamic routing protocol.

As to claim 13, the prior art of record does not teach , wherein all of the routers within the autonomous system transmit router advertisement (IRA) messages including the link state information of the DNS server to predetermined hosts which ask for a location of the DNS server, thereby automatically setting an address of the DNS server on the predetermined hosts.

As to claim 15, the prior art of record does not teach the server side router transmitting a link state advertisement (LSA) including a location of the DNS server to all routers within an autonomous system to which the DNS server side router belongs and replying to a request for a DNS address from a requesting router, wherein the requesting router, having received the reply, advertises a router advertisement (RA) message containing the LSA to a subnet in which the requesting router belongs. As to claims 19, the prior art of record does not teach transmitting the link state information, which indicates the existence of the domain name service server in the router subnet and stored in the link state advertisement, to all routers within an autonomous system to which the router belongs, through a flooding procedure of the predetermined dynamic routing protocol, receiving a request from a requesting router to provide an address of the domain name service server, and replying to the requesting router with the address of the domain name service server in the router subnet.

As to claims 20-21, the prior art of record does not teach each other router transmitting a DNS request message to the DNS server side router to provide an address of the DNS server existing in the DNS server side router subnet, in response to the DNS server side router link state

advertisement with the set DNS flag; transmitting a DNS reply message by the DNS server side router including the DNS server address to each other router, in response to the DNS request message; and each other router receiving the DNS reply message, advertising, according to each other router node discovery process, the DNS server address to nodes in respective subnets, thereby automatically setting the DNS server address in the nodes. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
